SMO

XS Infosol approaches project management with a long-term perspective and we work in partnership with our clients. Our approach to product development has always been an end-to-end service offering, right from design to coding implementing the final user interface.

Our involvement goes far beyond the actual delivery of software solutions and extends to ongoing technical support. In addition, we also extend technical support to our client's customer in India who end-use the software solutions developed by XS Infosol. This multi-tier involvement by XS Infosol benefits our clients enormously in the long run in building their own customer relationships. This customer oriented approach at XS Infosol ensures that we partner our clients in their continued success.

**Our Work Style :** XS Infosol is a company that is at ease in a fast paced technology driven business world. We focus on deploying technology in ways that can transform your business initiatives into successful business strategies with long-term implications. We take your business initiatives and turn them into reality with our advanced skills, innovative approach and highly developed conceptualizing abilities. In fact, our team is at their enthusiastic best when faced with fresh new business challenges. The more challenging, the better!

Internet observers know by now that the future of the web is Mobile. More and more users will access the data and information via smartphones, tablets and other portable devices. In today's era, mobile apps are becoming more and more popular with Internet users, however two years ago, users spent more time per day on browser-based sites than mobile apps. But that relationship had flipped, and apps were outpacing browser-based sites.

Being a mobile application development company, our expertise is in development of enterprise, e-commerce, educational and utility mobile apps. So your search for the best mobile application development company for iOS, Android and Windows ends here! Choose your platform and make a relationship with XS Infosol for some great mobile apps services. To get in touch with us, drop an enquiry.

We undertake mobile app development for various platforms including Windows mobile apps, Android & iPhone applications.

**Windows Application Development** : We provide Windows mobile apps solution that meets your all business requirements. Our development team has tons of experience in mobile phone applications development using different mobile platforms. We can save your time and money by developing business-specific applications for Windows mobile phones.

**iPhone Application Development** : We are highly proficient to get mixed with the client ideas to convert them into live applications. Our professionals use to work with the latest technologies of application development platform. Being an app development company, we have strong expertise in the areas of iPhone application development.

**Android Application Development** : Android is a well-known OS platform, used in various major smartphones available today. Due to its popularity, there is a great demand for Android-based applications in today's era. We have expertise in Android SDK, Java, XML, C++ etc. which makes us capable to shape your ideas into fully functional applications.

**Search Engine Optimization** : It is a myth that if your product is superior you don't need marketing and advertisement. Truth is that even the best products cannot win the market if it is not been marketed properly. And when we are living in the Internet era, web marketing plays a vital role in the growth of business. Even if you have a groundbreaking web site and you are providing quality service, there is no meaning of it, till your web site doesn't achieve good ranking in major search engines. And here comes the role of Search Engine Optimization. SEO is a practice to give your site better visibility in all the major search engines like Google, Yahoo and MSN and increase targeted traffic.

**Social Media Marketing** : We, at XS Infosol can create, deploy and maintain customized applications which can be capitalized to improve your business solutions. We develop feature rich applications considering the industry standards and industry evolution which fit to the needs of the customers. The software and systems developed by us would strengthen your business to stand in the changing market and serve as per the wants. Our custom application development solutions enable you to enjoy competitive advantages of the technologies and serve the industry best services. We offer application development, maintenance and support to all our large-scale clients which incorporates all the latest practices of the market. We broaden your business process through creation and implementation of high quality Custom Business Applications.

**Smart Dialer** : Predictive dialers are widely used in call centers. Predictive dialer systems are commonly used by telemarketing organizations involved in B2C (business to consumer) calling as it allows their sales representatives to have much more customer contact time. Predictive dialers may also be used by market survey companies and debt collection services who need to contact and personally speak to a lot of people by telephone. Predictive dialers can be thought of as supercharged autodialers.

**Smart IVR** : Interactive voice response (IVR) is a technology that allows a computer to interact with humans through the use of voice and touch-tone telephone keypad inputs. In telecommunications, IVR allows customers to interact with a company's host system via a telephone keypad or by speech recognition, after which they can service their own enquiries by following the IVR dialogue.
